Patrick G. Brennan, P.E.

PROJECT DESCRIPTION

The installation of interior circulation piping at Wellesley's four concrete reservoirs (770,000 gallon, 1.12-, 1.5- and 3.0-mil. gal.) included interior piping and inflow/outflow "Tide Flex" valves to improve water quality. The project was a result of hydraulic modeling and a prioritized distribution system improvement program prepared by Amory Engineers. This project also led to development of a unidirectional flushing program.
